AussieDuct

www.app.net.au

100% Australian made and owned

The AussieDuct name has been a significant part of the Australian Electrical scene for over 25 years and is synonymous with quality electrical cable management products – 100% Australian made!

The comprehensive range includes Mini and Maxi Trunking, Rigid and Corrugated Conduit, Skirting and Slotted Trunking and fittings to suit. A feature of this catalogue is the addition of many new products to the AussieDuct range as we strive to become a provider of total solutions.

Quality endorsed to AS / ISO 9001, Australian Plastic Profiles (APP) continues to serve the Australian electrical industry through our national network of branches which includes sales offices and warehouses in the mainland capitals as well as regional locations in Newcastle and Canberra.

Our focus remains on providing quality products at competitive prices; backed by superior service and by stock holdings which are the benchmark of the industry.

APP remains committed to the future and looks forward positively to growing with our supply partners.

Colour Suffixes: White=WH, Brown=CB, Grey=GR

Installation

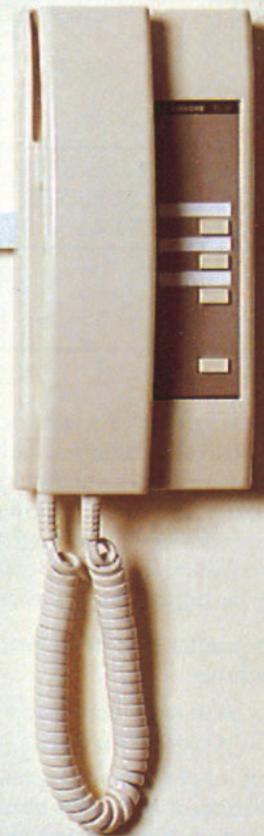

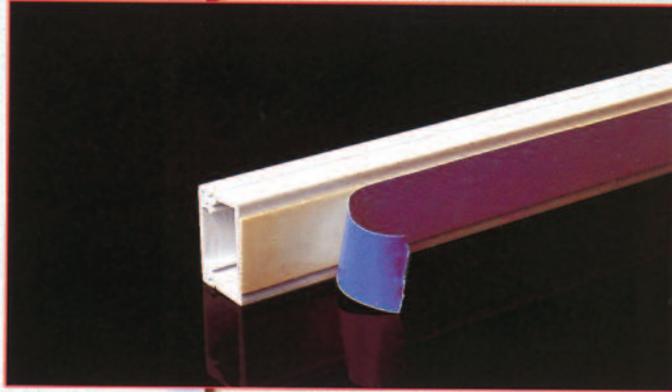

*These trunking accessories are moulded, therefore accurate mitreing and jointing is not necessary. All couplings, angles and T-pieces snap into position and the adjacent ends of trunking need only be rough cut. Cut the lid of the trunking 10mm shorter than the base for the accessory to snap into position. Trunking should be secured to the wall at greater than 150mm from an accessory to allow for minor discrepancies in the wall surface.

▲ These trunking accessories are fabricated, therefore follow these procedures.

1. Fix base of trunking and base of accessories to wall. (allow slotted mounting holes for thermal expansion).
2. Cut lid of trunking shorter than base by the same amount as the overlap of lid on the accessory. If more than one trunking length is to be fitted between accessories, cut only final lid to allow overlap of the base joint for added strength. Ensure that all cut ends are square and neat and a sufficient gap is allowed between lids for thermal expansion.

FABRICATED
▲ FITTING
(CD5025AFWH)

AussieDuct Mini Trunking with double sided adhesive tape is the ideal cable management system for use in domestic and commercial applications or where lease restrictions prevent structural or below-the-surface modifications to the electrical system.

Quick, Easy Installation due to the specially selected and applied double sided adhesive tape.

Even after installation, the AussieDuct trunking system may be easily altered to allow for upgrade or re-arrangement.

CC10T	10mm CABLE COVER WITH DOUBLE SIDED ADHESIVE TAPE	GREY	10

AussieDuct Maxi Trunking is manufactured to suit heavy duty cable management applications on commercial and industrial sites. As with Mini Trunking, installation is an easy operation, with the convenience of after-installation modification.

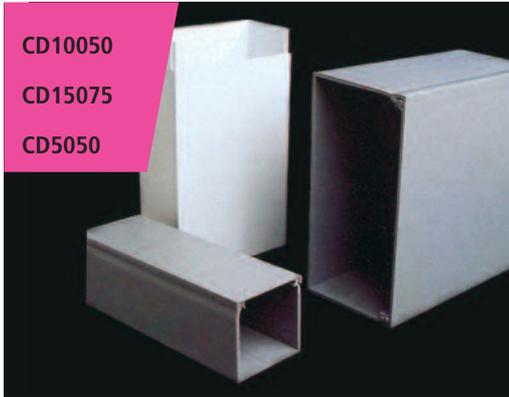

Installation

▲ These trunking accessories are fabricated, therefore follow these procedures.

1. Fix base of trunking and base of accessories to wall. (allow slotted mounting holes for thermal expansion).
2. Cut lid of trunking shorter than base by the same amount as the overlap of the lid on the accessory. If more than one trunking length is to be fitted between accessories, cut only final lid to allow overlap of the base joint for added strength. Ensure that all cut ends are square and neat and a sufficient gap is allowed between lids for thermal expansion (see technical specifications on page 39 for UPVC thermal expansion limits).

Alternate Data application for **SD16535IP**

AussieDuct PVC Skirting Trunking is a practical, maintenance free, totally accessible management system used for power, telephone, internal communication and other electronic requirements such as computer cabling.

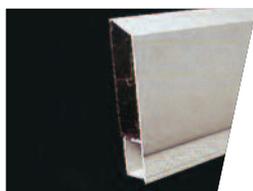

Benefits:

- Earthing straps are not required
- Greater cable carrying capacity than alternative materials for same c.s.a.
- Will not dent or mark
- Will not fade
- No sharp edges
- Standardisation of colours ensures practical refurbishment at a later date
- 2 channel trunking may be converted to 3 channel at a later date.

2 Channel Thru-way Skirting Trunking - SD13035

The 2 Channel Thru-Way skirting trunking is extruded from high impact UPVC being complimented by a full range of injection moulded UPVC accessories. It measures 130mm high by 35mm wide with standard length of 3600mm. It was developed to accommodate both power and telephone cables in an aesthetically appealing manner. Telephone cable capacity is 12.9mm² which will carry a 100 pair and a 50 pair cable - ample for most commercial applications.

3 Channel Thru-way Skirting Trunking - SD3535

Measures 165mm high x 35mm wide with a standard length of 3600mm. This is a combination of the 2 Channel with the 3rd Channel mounted beneath. This 3rd 'intercom' facility additionally allows for other electric requirements including computer cabling.

Method of Installing 2 Channel Trunking

- NOTE:**
- 1 Fixed by using screws or suitable masonry fixing either before or after floor covering is laid.
 - 2 When installing before the floor coverings are laid it must be mounted to allow the floor coverings to fit under the channel.
 - 3 Do not screw to metal, use adhesives.
 - 4 When cutting base ends ensure they are square before fixing.
- FIXING:**
- 1 Make sure all cut-outs for cable entry are made prior to fixing.
 - 2 (a) Cut timber blocks 15mm thick if floor covering in place, if not add proposed depth of floor covering to the 15mm.
(b) Stagger fixing holes in top and lower ducts as shown using 600mm maximum centres.
 - 3 Fix to wall.

Method of Installing 3 Channel Trunking

- NOTE:**
- 1 Fixed by using screws or suitable masonry fixing either before or after floor covering is laid.
 - 2 Do not screw to metal, use adhesives.
- FIXING:**
- 1 When cutting base ends and 3rd Channel ends ensure they are square before fixing.
 - 2 Make sure all cut-outs for cable entry are made prior to fixing.
 - 3 Place 3rd Channel against wall and floor and fix at 600mm maximum centres.
 - 4 Push lower edge of the 2 channel trunking into recess at top of 3rd channel.
 - 5 Fix 2 channel trunking to wall by staggering fixing holes in top and lower ducts as shown using 600mm maximum centres.

Method of Installing at corners and around pillars

(To meet Austel continuous skirting trunking specifications.)

Internal Corners: Cut the frontal upstands of duct A to the width of duct B. The ducts will then butt together at 90°. The exposed portion of the wall left by the butting will be covered by the corner plates.

External Corners: Cut the back of the duct B to the width of duct A. The channels of duct B will then protrude and butt flush with the channels of duct A.

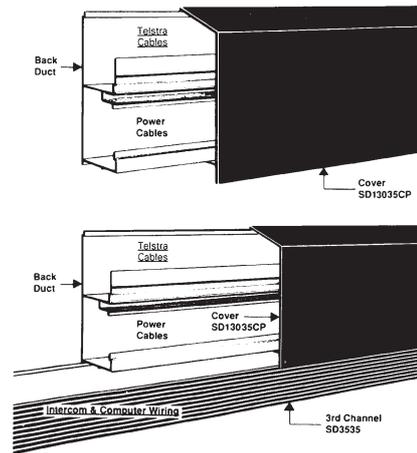

Around a Pillar: Treat internal and external corners as above. Note that it is also possible to make a mitre cut for external and internal corners.

Accuracy of cutting is not essential as blemishes will be concealed behind covers.

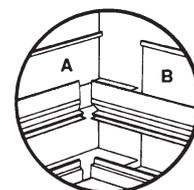

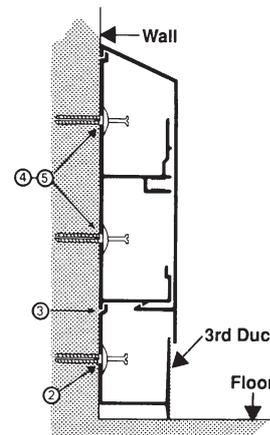

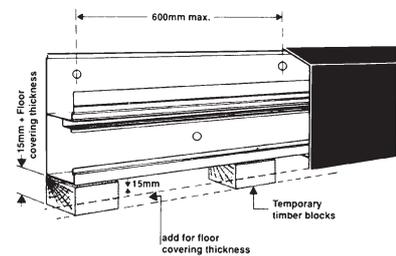

Accessory Range: There's an accessory for every requirement.

Internal and External Corner Covers: 2 channel only. Corner covers screw onto the main skirting to complete a 90° internal or external corner. (Recessed head screws provided).

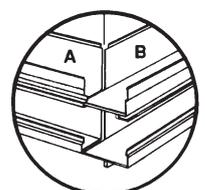

Left and Right Hand End Covers - 2 Channel and 3 Channel: When runs of skirting stop at doors and archways, they can be sealed off neatly with left or right hand end covers (Recessed head screws provided). The 3 channel system uses the same end covers as the 2 channel system plus an insert plate. The insert plate is standard for both left and right hand.

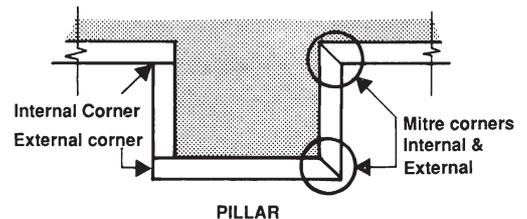

The accessories have been designed with 5mm overlap either side to allow for thermal expansion, so when cutting the duct cover to fit between accessories, allow a total of 10mm extra length.

INTERNAL CORNER

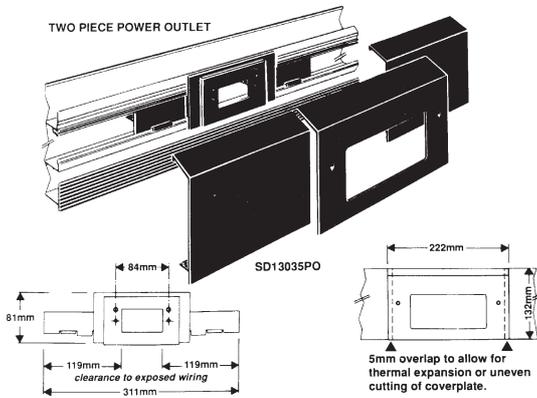

EXTERNAL CORNER

PILLAR

2 Piece Power Outlet - SD13035PO

Power outlets can be positioned anywhere along the run. Switch plate holding nuts are already welded in position.

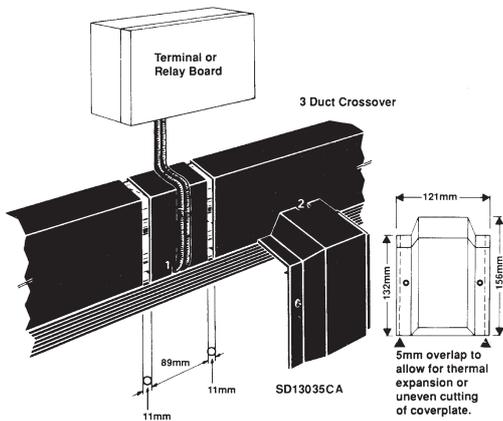

Acceptable Power Outlets

Due to the large number of different power outlets in the market place, and the design changes with the existing brands, it is recommended that installers assess the suitability of particular outlets prior to purchase.

3 Duct Crossover - SD13035CA

Used where Telstra, power or intercommunication cables enter the ducting system. Simply remove the appropriate portion of cover. Note that a short length of cover is retained behind the crossover plate to protect the cables in other ducts. A cut is made in both the duct cover and the crossover plate to allow entry of cables.

Coupler - SD13035C

When runs exceed maximum lengths (3.6m), or when short lengths of THRUWAY are used, the join is finished with the coupler and supplied screws.

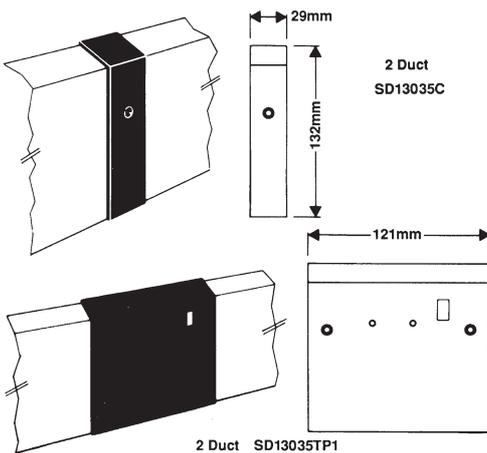

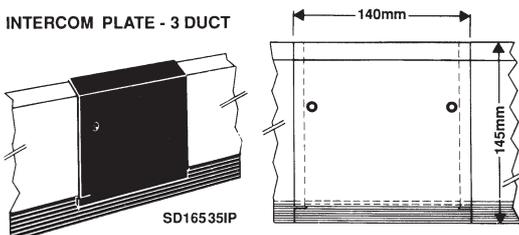

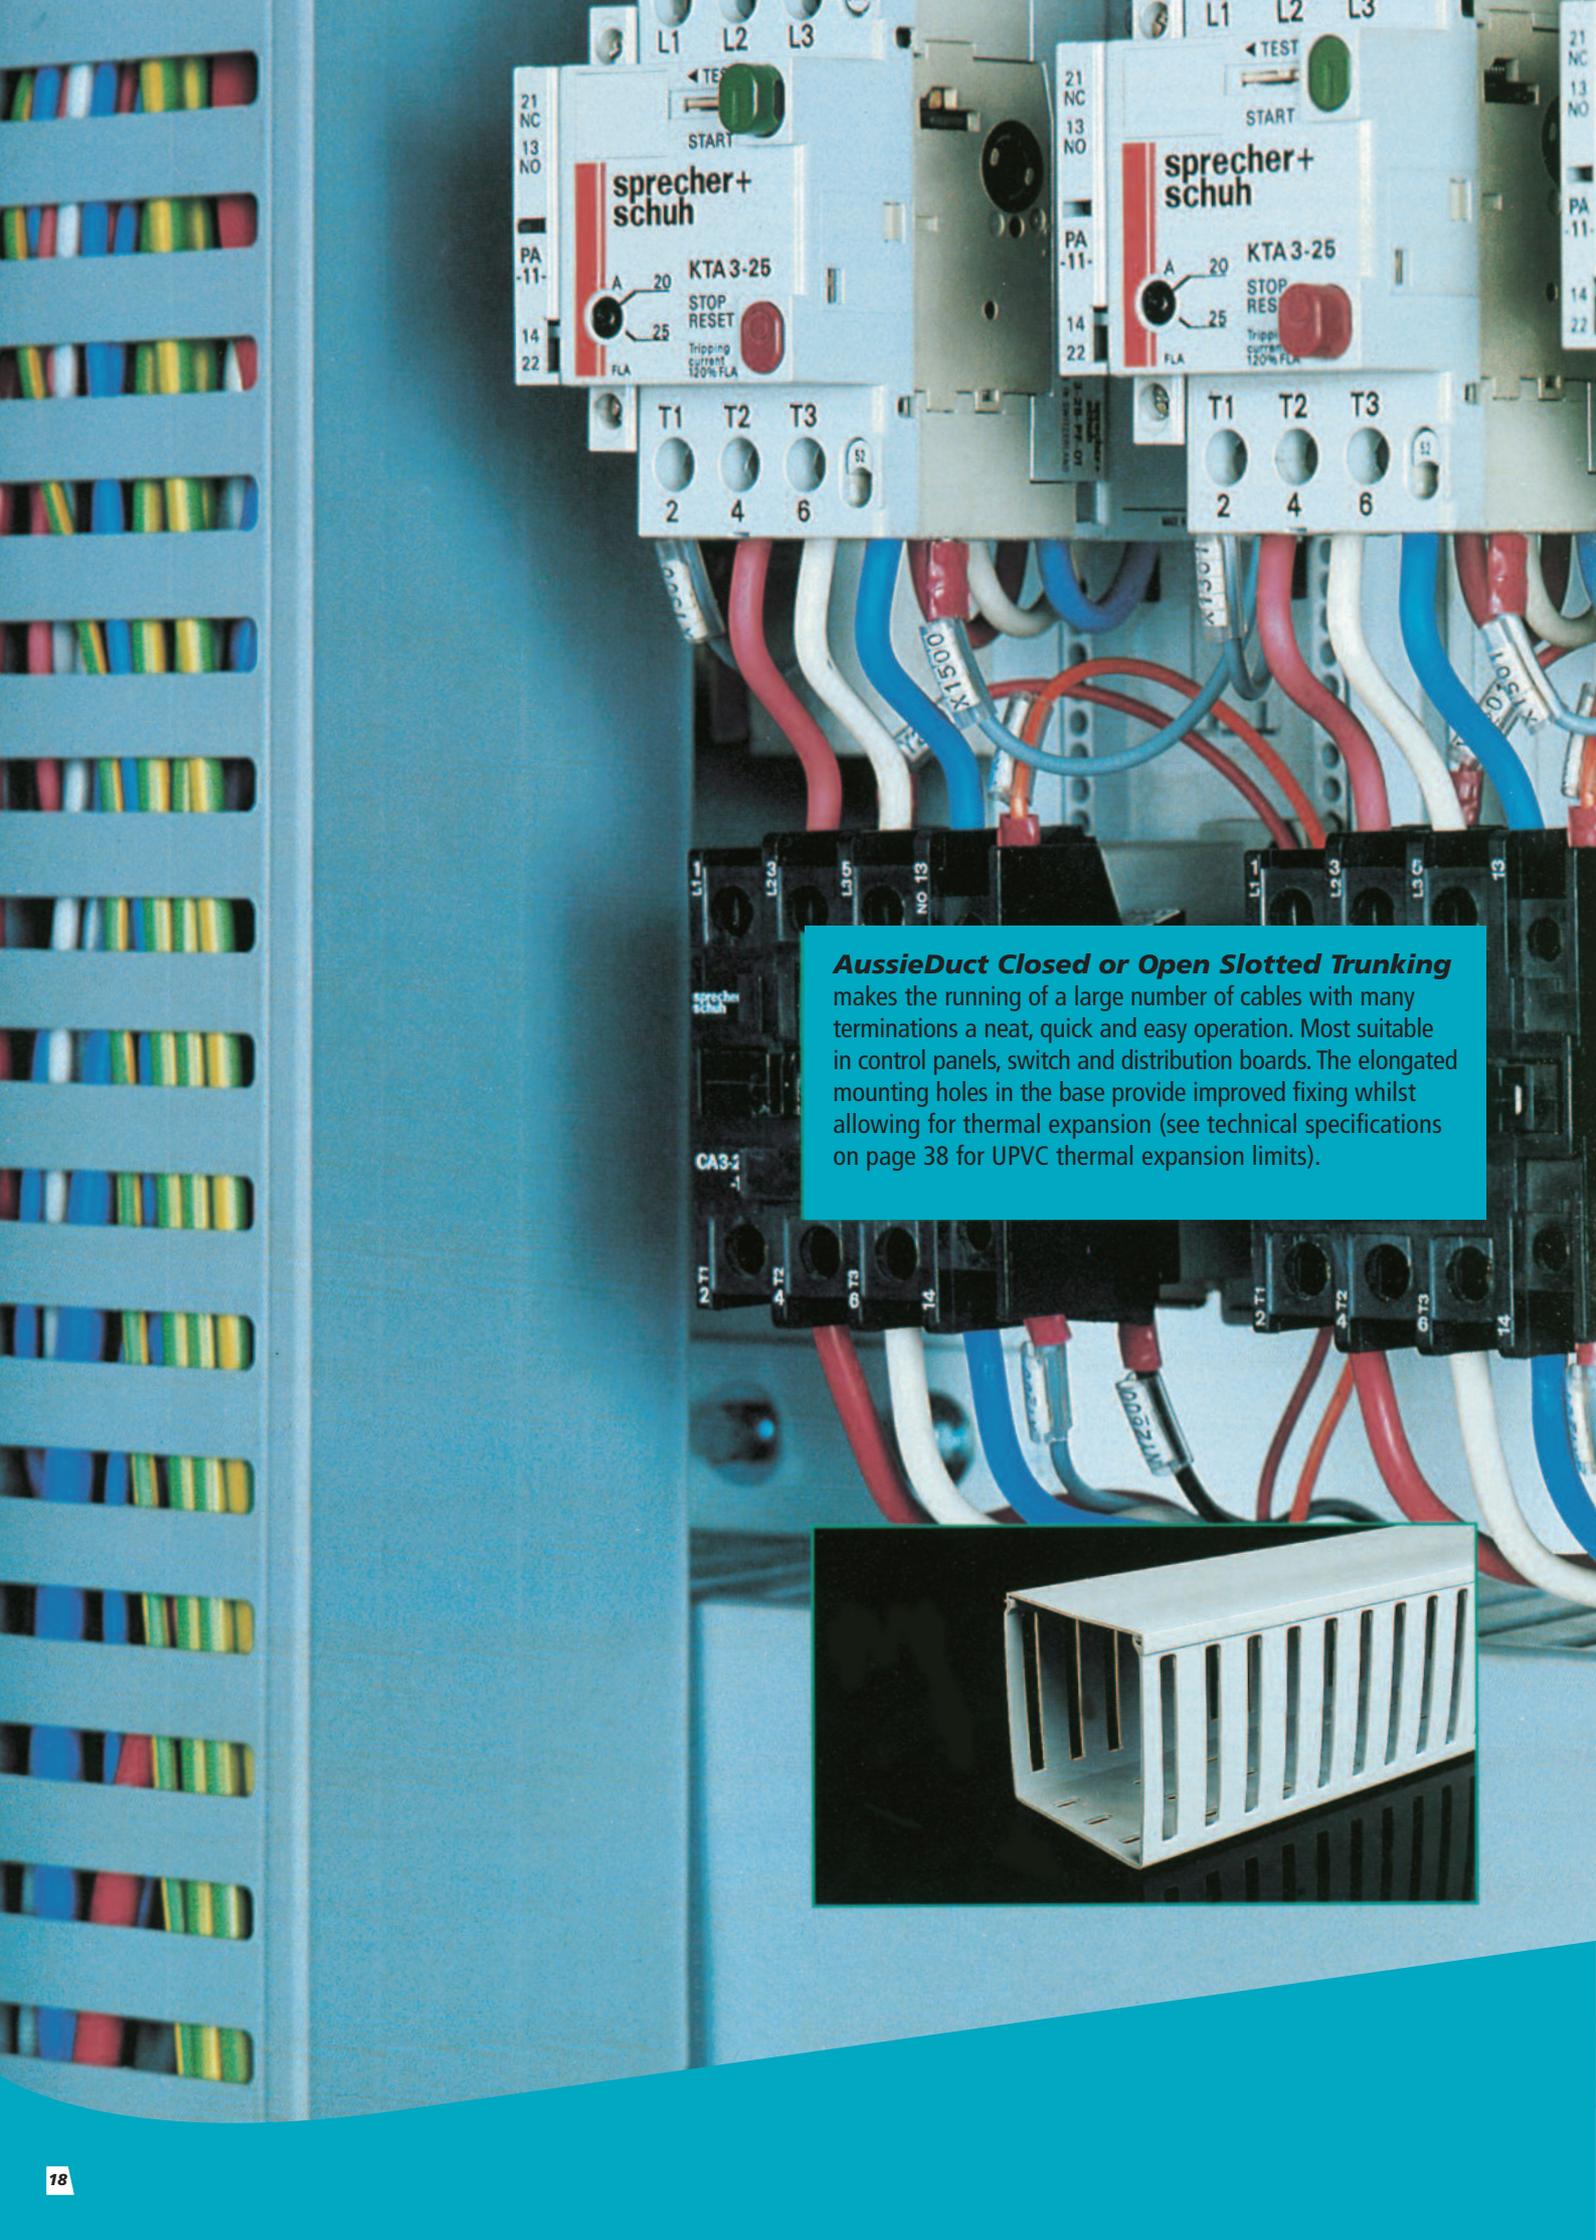

Plate for Telephone Socket - SD13035TPI

The outlet can be positioned by removing the appropriate length of cover. Each outlet is held by two screws.

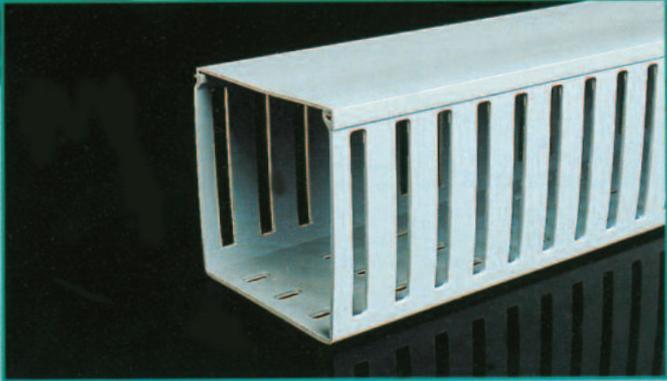

Intercom/Data Plate (2 or 3 Channel) - SD16535IP

The Intercom Outlet Plate can be positioned anywhere along the skirting. Removing the appropriate length of cover and insert the plate with two recessed head screws (provided).

AussieDuct Closed or Open Slotted Trunking

makes the running of a large number of cables with many terminations a neat, quick and easy operation. Most suitable in control panels, switch and distribution boards. The elongated mounting holes in the base provide improved fixing whilst allowing for thermal expansion (see technical specifications on page 38 for UPVC thermal expansion limits).
