Intelligent PDU's and Customised Power Rail Solutions

Intelligent PDUs, or iPDUs, are a small but essential part of the data centre energy supply chain. An Intelligent PDU works like a brain within the rack, providing comprehensive, accurate energy measurement data needed to reduce waste, enhance operations, and prove the business case for optimisation.

The Intelligent Power Distribution Unit sits within the rack continually looking for threats from electrical circuit overloads, and any physical or environmental conditions which might place critical IT computing loads at risk.

B&R is able to provide a range of Intelligent PDU's to suit any Data ICT project application. Speak to one of our team about your requirements today.

PDU Brackets

Allows for PDU's to be installed to the rack using many different configurations.
