Whether you need a cable tie that will stand out or blend in, CABAC stocks a variety of coloured ties to suit your requirements. The range has all the features of our regular cable ties, including rounded edges that won't cut insulation, space-saving head and an easy to grip bent tip for quicker installation. However, these cable ties are made from coloured nylon that also allows them to be used for identification.

Colour coding is an excellent way to quickly identify or differentiate cable bundles by type, inspection status or security level. Our range of coloured cable ties are perfect for this purpose, with multiple sizes available in five popular colours: red, orange, yellow, green and blue.

Alternatively, coloured cable ties are the ideal choice for blending in with wiring or conforming to surroundings of a similar colour. This provides a clean, professional finish.

No tools are required for installation, but we suggest using a cable tie tensioner when uniform tension and cut off is required.

Coloured cables ties are only suitable for indoor use.
