

# Identity Solution

## Identity Crisis?

A common problem in today's commercial buildings is the correct identification and labelling of power and data outlet circuits. Although this is a compulsory Australian Standard (AS/NZS 3000), until now there has been no specific method to efficiently apply these identification labels.

Associated problems with past methods of identification include:

### Sticker labels

- Aesthetics – tend to peel off and gather dirt becoming unsightly
- Regulations – if labels peel off, the installation may no longer comply with:
  - OH&S
  - AS/NZS 3000
- Maintenance downtime – additional time spent by maintenance staff to identify circuit during building maintenance.

### Plastic Identification studs

- Aesthetics – unattractive and protrude from the faceplate
- Integrity – require drilling of the faceplate – this affects the integrity of the product
- Functionality – drilling of the faceplate may interfere with the product's operation.

### Lack of uniformity

- On commercial projects the electrical and data communications installations are often carried out by separate contractors. It is not uncommon to see different brands, styles or colours installed, presenting the client with an unprofessional finish to their new building.

## Identity Crisis

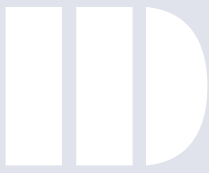

## Clipsal's Circuit Identity Solution

Clipsal is the first company in Australia to offer a window labelling system for 240V power outlets and data outlets. Clipsal's unique window labelling system will give you a secure sleek, professional finish that's easy to identify while protecting circuit identification from being damaged or tampered with.

Clipsal's window labelling systems are ideal for commercial developments where consistency of circuit identification is necessary, such as government buildings and offices.

Specify Clipsal's C2000 or SC2000 Identification Range for your power and data requirements and your project will benefit from:

- instantly identifiable labelling which meets AS/NZS 3000 regulations
- maintaining integrity and functionality of the product
- a sleek, professional, clean finish
- consistency and uniformity of product style and colour throughout project.

## Identifiable Outlets In a Range of Styles

Clipsal's practical circuit identification outlets are available in a range of styles to suit every application and décor. Clipsal's range will also ensure continuity in retrofit applications.

All models are available fully assembled or as an ID Cover Kit comprising the relevant pierced cover, the necessary transparent windows and some commonly used labels.

Clipsal's identifiable power and data outlets are available in:

- Classic C2000
- Slimline SC2000.

## Print Circuit Labels With Ease

Clipsal Label Printer Windows™ based custom software package is available as part of Clipsal's ecatalogue or alternately can be downloaded from clipsal.com by visiting <http://www.clipsal.com/label>

The Clipsal Label Software Package incorporates the following benefits to save the installer time:

- Simple data entry form
- Allows multiples of each label
- Allows multiples of consecutive labels
- Text colour selection
- Test page and setting adjustment facility – allows for different types of printers.

The Clipsal Label printer ensures perfect labels every time when printing on Clipsal label sheets. Clipsal label sheets are available in packs containing 10 pages with over 400 labels per page and provide the option of either:

- Non-adhesive labels (C2000A4L)
- Adhesive labels (SC2000A4L).

Both these styles are designed to fit securely behind the clear I.D. window.

1. Attach window

2. Insert label

3. Fit cover

4. Finished product
