Green Premium Overview -

The Pro Series – clever, strong, easy

Pro Series is the first range of hard-wearing switches and sockets designed to meet the needs of commercial buildings.

Clever features

After extensive market research and listening to customer feedback, we have designed a range of switches and sockets for commercial buildings to answer your needs. Pro Series offers permanent circuit identification with large integrated windows. The skin requires a tool to be removed and this helps to protect your investment. Planning, commissioning and installing of the Pro Series is quick and easy.

Attractive design

The range is aesthetically appealing with fresh, clean lines and beveled edges to deflect impacts. Available in white and black, the switches and sockets will blend into any commercial environment. The clean and seamless design makes for an elegant and timeless appearance and avoids attracting dirt. Pro Series is simple, functional design that's made to go the distance.

Extensive functions

The Pro Series includes a full range of products. Switches offer standard modules, and electronic modules such as sensors, timers and C-Bus. Sockets are available in several variants, and in horizontal and vertical orientation. There is also a wide choice of USB options available.

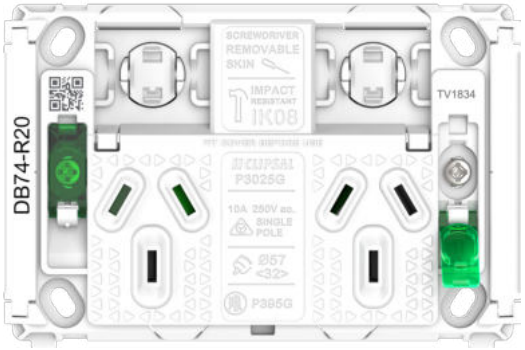
Clever features

Clear advantages

With Pro Series, a clear window is included to help protect the Circuit identification labels. No longer can circuit identifiers be damaged, wiped off, or made unreadable. The labels adhere to panels designed into the grids, so even if skins are inadvertently swapped during maintenance, the labels will always display the correct circuit identification. There are two windows on opposite edges, so it can be visible in any situation.

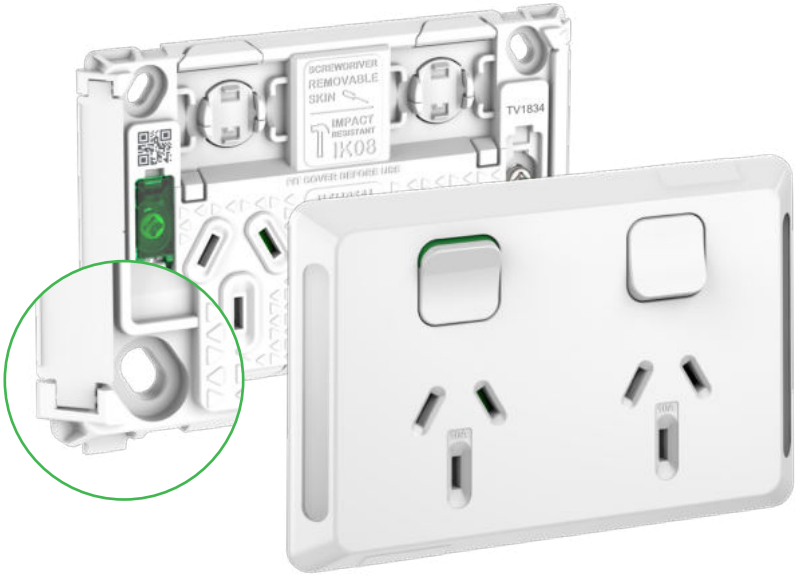


Consistent location on sockets and switches

Compatible with 9 mm Dymo and Traffolyte labels 55 x 7.5 x 1.6 mm

Public Spaces

Lost skins are a frequent problem in public buildings. The Pro Series comes with skins that clip-on but require a tool to remove. Fixing them is easy and fast – you simply click them onto the grid. No screws are needed. Special notches on the skins allow quick and easy removal with a screwdriver.



Long-lasting and robust

Sockets positioned low on walls can be exposed to rough conditions like bumps from trolleys and other equipment, which can often result in cracked or broken skins. That's why Pro Series sockets are made extra tough and have an IK08 impact rating*.

IK08 impact resistant

*Standard sockets only, does not include switches or sockets with extra switches.

Easier fit-offs

Switch plates

Locking bar

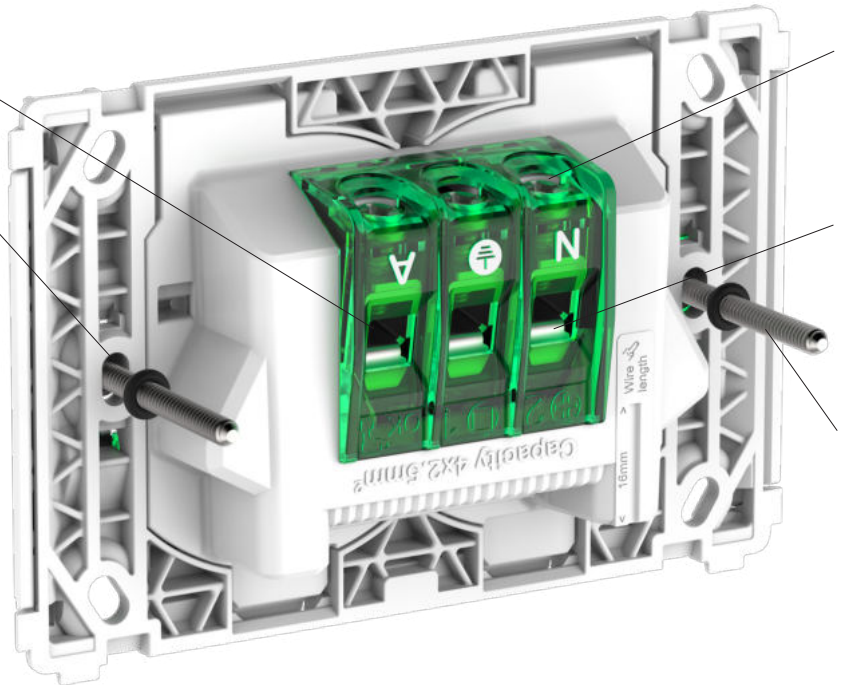
Pro Series has an attractive 9 mm thin design

Sockets

Large terminals
Accommodate up to 4 x 2.5 mm cables

Standard mounting
84 mm mounting centres fit standard mounting accessories



Captive terminal screws
Reduce the chance of screws falling out

Inline floating wrapper terminals
For easy screw access and termination

Pre-mounted screws

Ordering Information

The Pro Series range allows for hundreds of custom configurations, including features such as dimming, BLE and timeclocks. It is available either preassembled or customisable for personal configuration.

The modular design allows users to create custom configurations to suit any specific requirement. The Pro Series grids, modules and skins can be ordered separately to allow users ultimate convenience.

A variety of convenient and popular configurations are available pre-assembled in White to make ordering easier. Black skins can be purchased separably.

Pro Series is compatible only with the 40 Series modules.
